SEASONAL CHOICE OFFERING, November 1953

To our knowledge there is no one who collects orchids as foliage plants.

Our customers admire the luxurious verdant appearance of Rivermont plants, but each purchaser expects his plants to bloom.

There are hundreds of plants on the enclosed offering and many are IN SHEATH.

What better guarantee of eventual blooming could you have?

To help you make a satisfactory choice we tell you the exact number of sheaths, the pot size, and the price of each plant. Like all Rivermont offerings, the price is indicative of the cultural condition of the plant, the ancestry, the past and present bloom record, and all the other factors that enter into real evaluation of an orchid.

Contrary to popular opinion, there is no shortage of orchid plants. There is only a shortage of good plants. We destroy more plants annually than some of our competitors sell. This is your guarantee that every plant has been carefully checked and approved for your collection.

Then, if you are the one customer in 500 who is disappointed when his purchase arrives (just doesn't measure up to your mental picture of it) your money will be refunded cheerfully upon return of the plant. You can't lose when you buy from Rivermont.

This wide selection of plants includes varieties to bloom in every season. You can order one plant, a seasonal group, or an entire collection. You can order by color range. Some of the plants have hidden values because you can divide them after blooming.

Protect your Orchids

use  
HY-TOX

HY-TOX, the latest insecticide containing Malathon, has proven to be very effective over the past two years against soft brown scale, spider mites, aphids, and a wide range of other greenhouse pests.

We have found at Rivermont that by following a definite plant insecticide program of spraying once each month, we can keep our range free of insects. This program is recommended for anyone growing orchids, whether it be on an amateur's scale, or commercially.

HY-TOX is simple to use and does not require any special equipment other than an ordinary hand sprayer. The concentration of this material is such that a small amount goes a long way. The recommended concentration is one tablespoon per gallon of water.

Grow Healthier, More Vigorous Orchids,  
Producing More and Better Flowers

F E R T I L I Z E

There is no doubt that applications of completely soluble fertilizer at weekly or bi-weekly intervals from March 15 until September 25 are highly beneficial to your orchid seedlings, mature Cattleyas, Phalaenopsis, Cymbidiums, Zygopetalums, Cypripediums, and other varieties. It has been established that, because of the short days between September 25 and March 15 it is not necessary to fertilize orchids to stimulate them to optimum vigor. As everyone knows, it takes either long exposures of sunlight or artificial light to stimulate many plants into vigorous growth.

Rivermont recommends fertilizing seedlings and mature plants of Cattleyas, Cypripediums, and Cymbidiums; however, we should like to caution that if the plant does not have a well developed root system, it should not be fertilized under any circumstances, because the plant will not be capable of absorbing the nutrients which are made available in the potting medium.

These are the two fertilizers we use and recommend:

VHPF (Guaranteed Analysis 6% nitrogen, 25% phosphorous, 15% potash)

NUTRI-LEAF (Guaranteed analysis 16% nitrogen, 16% phosphorous, 16% potash)

Both of these superior plant foods contain trace elements and growth stimulating hormones. VHPF is used as a liquid fertilizer, and Nutri-Leaf is used as a liquid fertilizer and as a spray for the leaves. The recommended concentration of each is as follows:

When fertilizing weekly, use 1/2 tablespoon per gallon of water.

When fertilizing at two week intervals, use 1 tablespoon per gallon of water.

Try VHPF and NUTRI-LEAF on your orchids and observe the difference. Both of these fine plant foods are available in the 3 lb. economy-size package.
